SUMMARY

I have experience building LLM-based applications such as RAG chatbots and AI agents. I work mainly with Python and tools like LangChain and HuggingFace, and I am interested in developing simple, effective AI systems for real-world use.

WORK EXPERIENCE

Institute of Electronics, Informatics and Automation

Hanoi, Vietnam

AI Engineer Intern

July 2025 – March 2026

- Built a **RAG-based chatbot** for agricultural consulting (fertilizers, crops, and technical documentation), helping answer user questions in a more accurate and context-aware way.
- Developed data pipelines to process and index agricultural documents using Python and ChromaDB, achieving **92% Top-5 retrieval recall**.
- Improved response quality through **prompt engineering, chunking, and reranking**, increasing answer relevance by **+18%** and reducing hallucination by **25%**.
- Reduced system latency from **2.3s to 1.4s** by optimizing caching and context selection.
- Worked with domain experts to refine responses and make the chatbot suitable for real-world use.

AI Laboratory, Thuy Loi University

Hanoi, Vietnam

AI Research Assistant

Feb 2024 – June 2025

- Engineered data preprocessing pipelines for multimodal data (images, text) and built training workflows using **PyTorch, Torchvision, NumPy, Pandas**, and **OpenCV** for efficient data handling.
- Trained and fine-tuned YOLO-based models (YOLOv8/YOLOv11) for object detection, optimizing loss functions, hyperparameters, and augmentation strategies to improve performance on fine-grained datasets.
- Developed and evaluated LLM and vision-language models using HuggingFace Transformers, CLIP, and Vision Transformers (ViT), conducting experiments and ablation studies to enhance model robustness.

EDUCATION

Thuy Loi University

Hanoi, Vietnam

B.S. in Artificial Intelligence & Data Science

Aug 2022 – June 2026

- **GPA:** 3.33/4.0
- **Academic Excellence Scholarship:** Awarded for two consecutive semesters

HONORS & AWARDS

Best Paper Award — ICAI 2025: Awarded for the paper “AMAF-Net: Training-Free Multi-Modal Alignment for Fine-Grained Counterfeit Fruit Detection” Published in the ICAI 2025 proceedings. Publication.

CERTIFICATIONS

DeepLearning.AI Deep Learning Specialization: Covered neural networks, CNNs, RNNs, sequence models, and optimization techniques.

Samsung Innovation Campus — Artificial Intelligence Course: Completed with **Very Good** grade.

TECHNICAL SKILLS

Programming: Python, C++, C

Tools & Systems: Git, Docker, Linux, MLflow

ML/DL Frameworks: PyTorch, scikit-learn, HuggingFace **LLM & AI Systems:** RAG, LangChain, LlamaIndex, PEFT/LoRA

LANGUAGES

Vietnamese: Native

English: Intermediate, between B2 and C1 level
