WORK EXPERIENCE

Meta Neurons

AI Engineer Fresher

Hanoi, Vietnam

May 2026 – August 2026

- Built and managed **MCP tools** and designed **AI agent workflows** using **Claude SDK** and **Agno**, integrating backend APIs, caching, and **prompt engineering** to improve agent reliability and response quality.
- Wrote API documentation for backend-AI agent integration and deployed services with **Docker**, setting up **CI/CD pipelines with Jenkins** for automated build and release.
- Developed an internal **Telegram bot** system to automate the recruitment workflow, and conducted **benchmark evaluations** to assess and compare agent performance.

Institute of Electronics, Informatics and Automation

AI Engineer Intern

Hanoi, Vietnam

July 2025 – March 2026

- Built a **RAG-based chatbot** for agricultural consulting (fertilizers, crops, and technical documentations)
- Developed data pipelines to process and index agricultural documents using Python and ChromaDB, achieving **92% Top-5 retrieval recall**.
- Improved response quality through **prompt engineering, chunking, and reranking**, increasing answer relevance by **+18%** and reducing hallucination by **25%**.

AI Laboratory, Thuy Loi University

AI Research Assistant

Hanoi, Vietnam

Feb 2024 – June 2025

- Built multimodal data preprocessing and training pipelines using **PyTorch**, **Torchvision**, **NumPy**, **Pandas**, and **OpenCV** for efficient model development and experimentation.
- Trained and evaluated YOLO-based object detection and vision-language models (**YOLOv8/YOLOv11**, **CLIP**, **ViT**) with optimization, fine-tuning, augmentation, and ablation studies to improve robustness and performance.

EDUCATION

Thuy Loi University

B.S. in Artificial Intelligence & Data Science

Hanoi, Vietnam

Aug 2022 – June 2026

- GPA:** 3.33/4.0

KEY PROJECT

VietTraffic: Agentic RAG for Vietnamese Traffic Law QA | GitHub

Graduation Project

- Engineered an Agentic RAG platform (**Gemini**, **DeepSeek**, **Groq**) by **LangGraph**, processing over **3,000+ semantic legal chunks**. Integrated **Tavily Search** + **HITL dashboard** to ensure **100% verified** real-time legal consulting.
- Architected a **FastAPI/Docker** microservice with custom NLP pipelines (PyVi + SentenceTransformers), reducing outdated legal advice by **100%** by automated conflict resolution and improving retrieval accuracy by **40%** using **Hierarchical Chunking** and Qdrant Hybrid Search.

Tech Stack: Python, FastAPI, LangGraph, Gemini, Qdrant, Sentence Transformers, Docker

HONORS & AWARDS

Best Paper Award — ICAI 2025: Awarded for the paper “AMAF-Net: Training-Free Multi-Modal Alignment for Fine-Grained Counterfeit Fruit Detection” Published in the ICAI 2025 proceedings | **Publication**

CERTIFICATIONS

DeepLearning.AI Deep Learning Specialization: Covered neural networks, CNNs, RNNs, sequence models, and optimization techniques.

Samsung Innovation Campus - AI Course: Completed with **Very Good** grade.

TECHNICAL SKILLS

Programming: Python, C++, C

ML/DL Frameworks: PyTorch, scikit-learn, HuggingFace

Tools & Systems: Git, Docker, Linux, MLflow

LLM & AI Systems: RAG, LangChain, LlamaIndex, PEFT/LoRA

LANGUAGES

English: Intermediate (TOEIC 718/990)
